Subject: RE: Tanguay lab zebrafish method

Thanks so much Monica and Cameron!

My student and I actually just had a helpful phone call with Lisa Truong this morning, who helped address our primary questions. But I will follow up with Richard in a separate email about a relevant follow up question we have.

Thanks,
Shoba

Hi Shoba,

I am sorry for the delay responding to your email. I somehow overlooked your email and did not respond until now. Richard Judson, copied on this email, will be able to help you with your questions below regarding the zebrafish data.

Monica

Subject: Tanguay lab zebrafish method

Hi Monica,

I hope this email finds you well! I know it's been a while since I've reached out to you with ToxCast questions, so please let me know if I ought to send this request to another staff member instead of you.

I am working with a student intern we have here in the office, and we are attempting to do an exploratory dose-response assessment using ToxCast zebrafish data. As we've been exploring the zebrafish data in the ToxCast dashboard, we're realizing we have some questions about the approach that the Tanguay lab used, and we aren't able to find the answers to our questions in the publication we've looked at. We're having trouble connecting the details in the publication to the types of data displayed on the dashboard. Is there someone at NCCT that you could put me in touch with? Or would you recommend that I reach out to the Tanguay group, or Lisa Truong, directly? We want to understand the data displayed on the dashboard, which is why I think chatting with an NCCT researcher might make more sense. I'd love to set up a phone call so my student and I can make sure that we are properly understanding the zebrafish dashboard data.

Thanks much,
Shoba
